2025 Annual Update

Learn about our recent advancements and how we are staying ahead of growing solution trends.

CSFi Simulator (CSFi-SIM)

Deploying SWITCHWARE requires expertise in configuring and establishing connections with local, regional, and international payment networks such as Visa and MasterCard. Most of these networks use standardized ISO 8583 or XML message formats for system communication. To address the growing demand for effective testing tools, CSFi has developed a Windows-based application that provides real-time simulation of nearly any interface. The tool enables on-the-fly transaction testing to ensure interface modifications can be implemented safely, reliably, and without service disruption...

CSFi Offers Real-Time Solution for Argo Teller Payments

The increasing adoption of Argo (argodata.com) Teller Payment solution by banks, credit unions, and other financial institutions has created a demand for reliable, real-time payment processing. With several institutions already operating the joint Argo/CSFi solution—and many more planning deployments in the coming years—this integrated platform offers a secure and efficient method for validating cardholder credentials via a debit card at the teller station. By integrating directly with the core banking system, Argo's solution enables cardholders to verify their identity simply by inserting a card and entering a PIN, eliminating the need for traditional forms of identification...

New Features and Services from CSFi

CSFi is proud to expand our arsenal of services and solutions to better equip all our customers with the best possible experience in payments software. We will now offer our customers these new features:

- **Automated Trace Enhancements.** Provides an archival function where the SWITCHWARE trace files are backed up at a defined interval to preserve what would otherwise be overwritten.
- **Database Conversion Services.** Interested in migrating from IBM Informix to Oracle? CSFi offers tools and services to make the change seamlessly.
- **PAN Tokenization**COMING SOON!**.** SWITCWHARE 5 will soon have options to fully tokenize the issued cardholder's PAN throughout the database.
